CD288 Recombinant Protein

talog: BCP3576	Host: E.coli	Tag: His-tag	
----------------	--------------	--------------	--

BackGround:

Members of the Toll-like receptor (TLR) family, named for the closely related Toll receptor in Drosophila, play a pivotal role in innate immune responses. TLRs recognize conserved motifs found in various pathogens and mediate defense responses. Triggering of the TLR pathway leads to the activation of NF-kB and subsequent regulation of immune and inflammatory genes. The TLRs and members of the IL-1 receptor family share a conserved stretch of approximately 200 amino acids known as the Toll/Interleukin-1 receptor (TIR) domain. Upon activation, TLRs associate with a number of cytoplasmic adaptor proteins containing TIR domains, including myeloid (MyD88), differentiation factor 88 MyD88-adaptor-like/TIR-associated protein (MAL/TIRAP), Toll-receptor-associated activator of interferon (TRIF), and Toll-receptor-associated molecule (TRAM). This association leads to the recruitment and activation of IRAK1 and IRAK4, which form a complex with TRAF6 to activate TAK1 and IKK. Activation of IKK leads to the degradation of IkB, which normally maintains NF-kB in an inactive state by sequestering it in the cytoplasm.

TLR8 is an intracellular TLR localized to the endoplasmic reticulum, endosomes, lysosomes, and endolysosomes. It is activated by single-stranded viral RNA, as well as synthetic imidazoquinoline compounds including R-848. TLR8 expression is highest in the lung and in myeloid cells. In addition, expression is upregulated by IFN- γ in monocyte-like leukemic THP-1 cells that have been differentiated with TPA.

Product:

4M Urea, PH7.4

Molecular Weight:

~88kDa

Swiss-Prot:

O9NR97

Purification&Purity:

Transferred into competent cells and the supernatant was purified by NI column affinity chromatography and the purity is > 85% (by SDS-PAGE).

Restriction Sites:

NdeI-XhoI

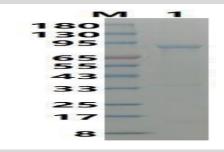

Storage&Stability:

Store at $4 \,^{\circ}$ short term. Aliquot and store at $-20 \,^{\circ}$ long term. Avoid freeze-thaw cycles.

Expression Vector:

pet-22b(+)

DATA:

Note:

For research use only, not for use in diagnostic procedure.
